

INSIGHT to the Network

Network Analytics Services

Introduction:

Insight is combination of cost-effective network analytics professional services and software for converged-access communications service providers (CSPs). By using open-source and paid industry's leading software we can assist the end customers to get complete visibility of their network traffic. Techniques includes data processing, parsing and visualizations. Service providers can enable their NOC/SOC team to visualize their traffic trends coming in or out of their Edge to Core network. Traffic engineering, CDN deployments, business decisions for ISPs and Enterprises having Gigabit network can be assisted by this solution.

Insight can assist in providing understanding of your network traffic and classifying the data by delivering metrics that matter. Business intelligence coupled with insight of traffic originating from global autonomous systems can be used for threat hunting, security monitoring and logs forensics.

Highlights:

- Accurate insights of internet activity from Core to Edge.
- Insights of top conversation partners in a network
- Geo location details/heat map of network sources and destinations
- Global autonomous systems trends from or towards your network
- Connected clients and servers within the network

Features:

Visibility up to Layer 7

- OSI Protocol
- 200+ L7 Applications
- Custom Search Rules
- Deep Packet Inspection
- Reports

Visualizations

- Dashboard
- Pie Charts
- Histograms
- Trends

Dashboard

- IP Filtering
- Clients/servers
- IP Monitoring

Use Cases

- Internet Monitoring
- User Monitoring
- Real-time Visualization

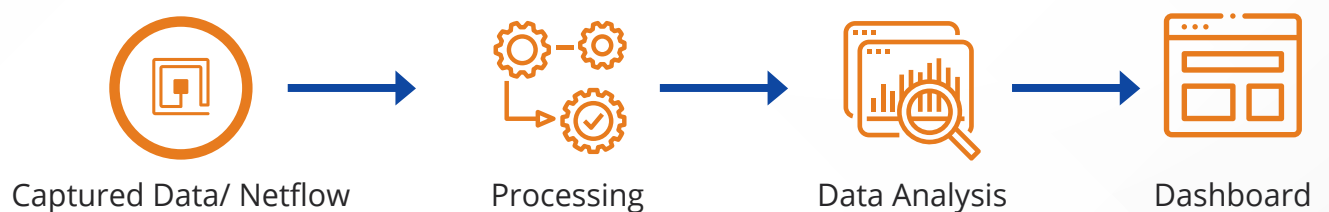

Data Processing

- High Speed Data Processing
- Analytics Engine

Support

- Design
- Deployment
- Technical Training

Common Deployment:
